LECTURE 3 – SUCCESS CRITERIONS, USER-CENTRIC PUBLIC SERVICE DESIGN, PERSONAL COURSE WORK

Mihkel Lauk
ITE4230 - Public Sector Service Design and Implementation
Tallinn University of Technology

03.10.25

AGENDA

- 10 principles for successful change
- User-centric service design
- Public Service Lifecycle Model
- Personal Coursework timeline – November schedule details
- Personal Coursework requirements

10 PRINCIPLES FOR SUCCESSFUL CHANGE

03.10.25

PREREQUISITES FOR SUCCESS

ESTONIA'S NEW TIGER LEAP – DIGITALIZATION* OF THE STATE MANAGEMENT (USER-CENTRIC SERVICE DESIGN)

* While **digitization** focuses on converting and recording data, **digitalization** is all about developing processes and changing workflows to improve manual systems.

USER-CENTRIC SERVICE DESIGN - INSPIRATION

WE PLAN

THEY PERCEIVE

GROUP DISCUSSION – DEFINITIONS

- What is:
 - SERVICE DESIGN
 - USER EXPERIENCE (UX) DESIGN
 - USER INTERFACE (UI) DESIGN
- Discuss in groups, write down your definitions, give examples.
- Present your thoughts
- Time: 10 minutes

SERVICE DESIGN, UX DESIGN & UI DESIGN - DEFINITIONS

SERVICE DESIGN & SERVICE STAGES

CLIENT JOURNEY MAP

- A customer journey map is a visual storyline of every engagement a customer has with a service, brand, or product. The customer journey mapping process puts the organization directly in the consumer's mind to better understand the customer's processes, needs, and perceptions.

Retail customer journey

" I'M SETTING UP A BUSINESS "

" I'VE LOST A CLOSE RELATIVE "

PUBLIC SERVICE LIFECYCLE MODEL

03.10.25

THE LIFECYCLE MODEL

INITIATING & PLANNING PHASE

- **Stakeholders' management** – know them, involve in process, and invest in relationships.
- **e-Service Strategy creation** – policy planning, impact of the change for all aspects of the organisation:
 - organisational setup, split of roles & responsibilities;
 - changes in the processes;
 - changes in the knowledge required for the changed processes;
 - changes in the ICT tools enabling the e-service.
- **Setting the KPIs** supporting the evaluation and assessment of the project.
- **Risk management** - all important risks must be considered during the planning phase to properly plan their mitigation.
- **Project proposal and plan creation** – the initiating & planning phase must end with the comprehensive document package, which is an input for the budgeting phase.
 - Business architecture and process analysis, legislative analysis.

BUDGETING & FINANCING PHASE

- Purpose of this phase is to **secure the funding** for the project. Several resources can be considered for e-services: regular budget, EU structural funds, other funding.
- Budgeting is an iterative process in purpose to refine the estimates through the course of the project to support achievement of the project objectives.
- Important activity of the budgeting phase is **Cost-Benefit Analysis** – KPIs will be assessed against the costs. The expected measurable benefits must be bigger than the costs. However, sometimes this rule can be overridden by the government (i.e., for the vital services).
- Costs are not related only to the procurement. Also, the internal resource costs should be calculated as well.
- Suggested methods: Activity Based Costing (ABC); Total Cost of Ownership (TCO).

IMPLEMENTING PHASE

- **Implementation strategy** – it's all about the change - how to conduct changes and motivate people.
- **Allocation of resources** (human, financial, facilities).
- **Policy enforcement.**
- Creating a detailed and effective **project plan**.
- Execution of the project plan is a major activity of this phase.
- **Measuring success** – progress of the project, achieving the benefits.

OPERATIONS & MAINTENANCE PHASE

- In this phase the implemented e-service is **handed over** to the operations team. It can be internal IT service provider or external vendor.
- Creating your own **maintenance plan** is prerequisite for this phase - developing an organisation-specific policy that supports the software and organisational solutions.
- **Maintenance costs planning** - how to pre-evaluate and plan for the costs.
- The common **big mistake** is that the implementation costs are calculated but the long-term ownership costs are being forgotten. Result – the e-service operation costs are not allocated, and it puts additional pressure to the regular budget.

CONTROLLING & EVALUATION PHASE

- In this phase it's all about the **assessment of the planned benefits**.
- **Measurement criteria** must be in place – KPIs, planned and actual results. Specific criteria for gaining feedback about the implemented solutions, effectiveness.
- **Monitoring** must be continuous.
- The performance audit should be organised on regular basis.
- This phase gives additional input to the new cycle of the public service lifecycle – to the planning phase.

PERSONAL COURSEWORK TIMELINE

NOVEMBER SCHEDULE DETAILS

03.10.25

PERSONAL COURSEWORK AND NOVEMBER SCHEDULE

- Master program events
- 05.11. 13:00-14:30 Guest
Lecturer: Hogle Sarapuu-
Johanson, Neuro UX
- The whole October: mentoring
for the personal course work in
Teams.
- Exam dates (affects the
personal coursework deadline):
 - ASAP in November?
 - Rather later in December?
- Until then read all the course
materials in Moodle/Teams.

PERSONAL COURSEWORK REQUIREMENTS

03.10.25

PERSONAL COURSEWORK REQUIREMENTS

- The aim of the case-based personal work is to create a real-life or hypothetical e-service that would contribute to e-society.
- Mandatory structure and focus points:
 - E-service title
 - E-service description
 - Target group
 - Value definition
 - Output + metrics
 - Outcome + metrics
 - Initiating & planning
 - As-is situation, proof of the need for the Improvement Project.
 - To-be situation, output and outcome of the Improvement Project.
 - Success metrics of the Improvement Project.

GRADING

- The grade will be given for the understanding of the course subject.
- The homework length is not important – write as less as possible but long enough to prove that you understand the subject.

The TAL TECH logo is positioned in the upper right corner of the slide. It features the words "TAL" and "TECH" stacked vertically in a bold, white, sans-serif font. The background behind the logo is a horizontal gradient transitioning from a light blue on the left to a deep magenta on the right. A solid magenta vertical bar runs down the left side of the slide, with a small rectangular notch cut out near the bottom left corner.
